

Galleries and Platforms Engineering

PlantWare A/S generally design access- and gangways for plants, tanks etc. in connection with project design of manufacturing plants. By doing so, it is possible to coordinate gangways, pipework, cabling,

and support structures in a single 3D model. By doing so, one can ensure that there is safe and easy access to any part of the plant requiring inspection and maintenance.

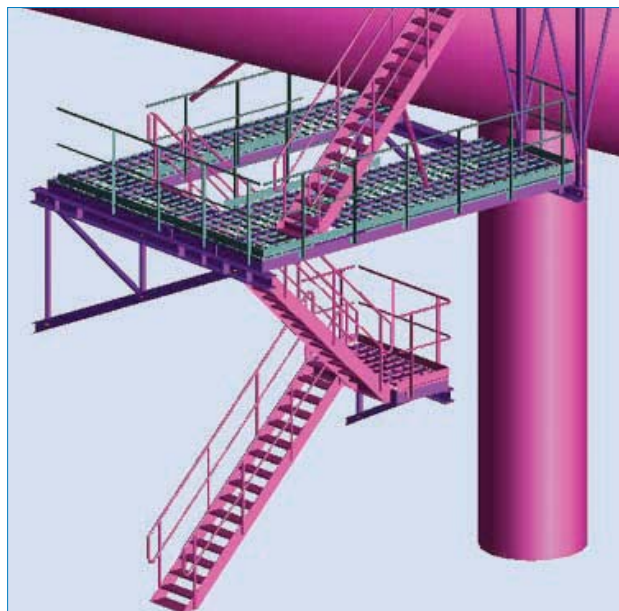

Using 3D PDMS, PWE design grille and stepwork, where 'obstruction volumes' are inserted into the model design. This ensures that legal or contractual requirements for 2.1m and 2.3m can be guaranteed.

PWE design galleries using our own developed PDMS applications. This makes the automatised engineering of support structures, railings, stairs etc possible. Because of this, Plant Ware can compete with e.g. Polish contractors in the completion of detailed technical drawings.

Priceing:

PWE produce detailed projection of steel, galleries, stairways etc at a competitive price from around 0.50DKK/Kg for main structure to 3.00DKK/Kg for capping rails.

New platform for access to flue gas duct; Vestforbrændingen I/S

Galleries and Platforms Contracting

PlantWare Contractors ApS can organise the production and delivery of steel components, stairways, galleries, railings, etc based on our own engineering, should the customer find that a total solution the most competitive. Our production takes place both in Den-

mark and Spain. Our list of references include both new construction and remodelling of steel construction and gallery work for Amager Incineration and West Incineration.

Production in Spain

This photo shows handrail sections being produced in our workshop near Madrid in Spain. We have chosen Spain because the quality of work is high and the price is extremely competitive. Tours of inspection are very cheap compared to e.g. Poland, due to the competition between Airlines for the routes between Denmark and Spain, both for low prices and many daily departures.

All of our engineers are fully trained and section 26 qualified; even the supervisor can give a helping hand when the need arises! By allowing this, we can expect top productivity when it comes to the assembly work.

Contact us for estimates for steel constructions, railings, galleries, catwalks, stairways, silo gantries etc:
