

Iranian Agent

PlantWare has signed up with Mehras Energy Consulting Engineering Co. Ltd. in Iran as local partner in the area. The picture shows the management and sales team of Mehras: Daryoush Pourkhalili, Abtin Shahkarami, Ramin Shahkarami and Hossein Shahkarami. Mehras and PlantWare will pursue business within e.g. power as well as oil & gas and shipbuilding in Iran and Pakistan.

Domestic Plumbing for Residential Building

Valbylanggaard A/S (Denmark)

PlantWare engineered the design for new domestic plumbing for Valbylanggaard in Valby, Denmark. The old piping was clogged with lime scale and ferrites. There was no longer sufficient water pressure to adequately supply the whole building. A new installation was designed, including a new booster pump, to raise the pressure from the municipal supply.

PlantWare handled the procurement of contracting services and supervision of construction. L&H Rørbyg A/S (www.rorbyg.dk) won the order for renewing the installations.

Buffer Preparation

PlantWare are specialist in engineering of buffer preparation for chemical and pharmaceutical plants. Please visit either www.buffer-prep.dk for further information and reference examples or contact us for a quote for engineering - basic or detail.

Skid Mounted Buffer System for Purified Water

Gentofte Hospital (Denmark)
www.gentoftehospital.dk

PlantWare has handed over the two buffer units to Gentofte Hospital (Copenhagen) and they are now in operation at the new wing of the hospital.

For both units the pressure in the loop is primarily controlled by frequency controlled pumps and secondary by pneumatic operated control valves, so water for spray nozzle is reduced if water consumption exceed pump maximum. Furthermore, this unit has automated sanitation program where the units as well as the loops get sanitized through circulation of water heated to above 85°C for 35 minutes. The water is primarily heated through double plated sanitary heat exchanger and secondly through electrical elements.

The units was delivered in cooperation with ALECTIA (www.alectia.dk) whom was consulting engineers for the client.

Please contact us for a quotation for skid mounted units for e.g. purified water, purified compressed air, kill and neutralization systems, CIP systems to be used in hospitals, pharmaceutical plants, food processing or similar:
